Acronyms

Acronyms in the following list that are marked with an asterisk appear in this document only in titles of referenced materials. Some of the marked acronyms appear only once in the document.

*ADPCM	Adaptive Differential Pulse Code Modulation
AES	Advanced Encryption Standard
*CIDR	Classless Inter-Domain Router
*CRL	Certificate Revocation List
*DHCP	Dynamic Host Configuration Protocol
*DiffServ	Differentiated Services
DSCP	Differentiated Services Code Point
FTP	File Transfer Protocol
GPS	Global Positioning System
*HAIPE	High Assurance Internet Protocol Encryptor
HTTP	Hypertext Transfer Protocol
ICMP	Internet Control Message Protocol
IGMP	Internet Group Management Protocol
IP	Internet Protocol
IPv4	Internet Protocol version 4
ITU	International Telecommunication Union
LLC	logical link control
MAC	media access control
MLD	Multicast Listener Discovery
OSI	Open Systems Interconnection
*PCM	Pulse Code Modulation
*PIM-SM	Protocol-Independent Multicast-Sparse Mode
PPS	pulse per second
PTP	Precision Time Protocol
RCC	Range Commanders Council
RF	radio frequency
RFC	Request for Comment
RTSP	Real-Time Streaming Protocol
SNMP	Simple Network Management Protocol
SOQPSK	shaped offset quadrature phase shift keying
SSL	Secure Sockets Layer
TCP	Transmission Control Protocol
TLS	Transport Layer Security
TMA	TmNS manageable application
TmNS	Telemetry Network Standard
UDP	User Datagram Protocol
URI	Uniform Resource Identifier
URN	Uniform Resource Name
*USM	User-based Security Model

*VACM

View-based Access Control Model

CHAPTER 22

Network-Based Protocol Suite

22.1 General

The Telemetry Network Standard (TmNS) leverages existing standardized Internet protocols to serve as the core set of communication protocols used by *NetworkNodes* within a *TmNS Network*. The TmNS's network-based protocol suite incorporates a large portion of the Transmission Control Protocol (TCP)/Internet Protocol (IP) Protocol Suite (also known as the Internet Protocol Suite) along with other supporting technologies (e.g., underlying data link and physical layer technologies). [Figure 22-1](#) illustrates the Open Systems Interconnection (OSI) Model, the corresponding TCP/IP Model, and the major components of the TCP/IP Protocol Suite.

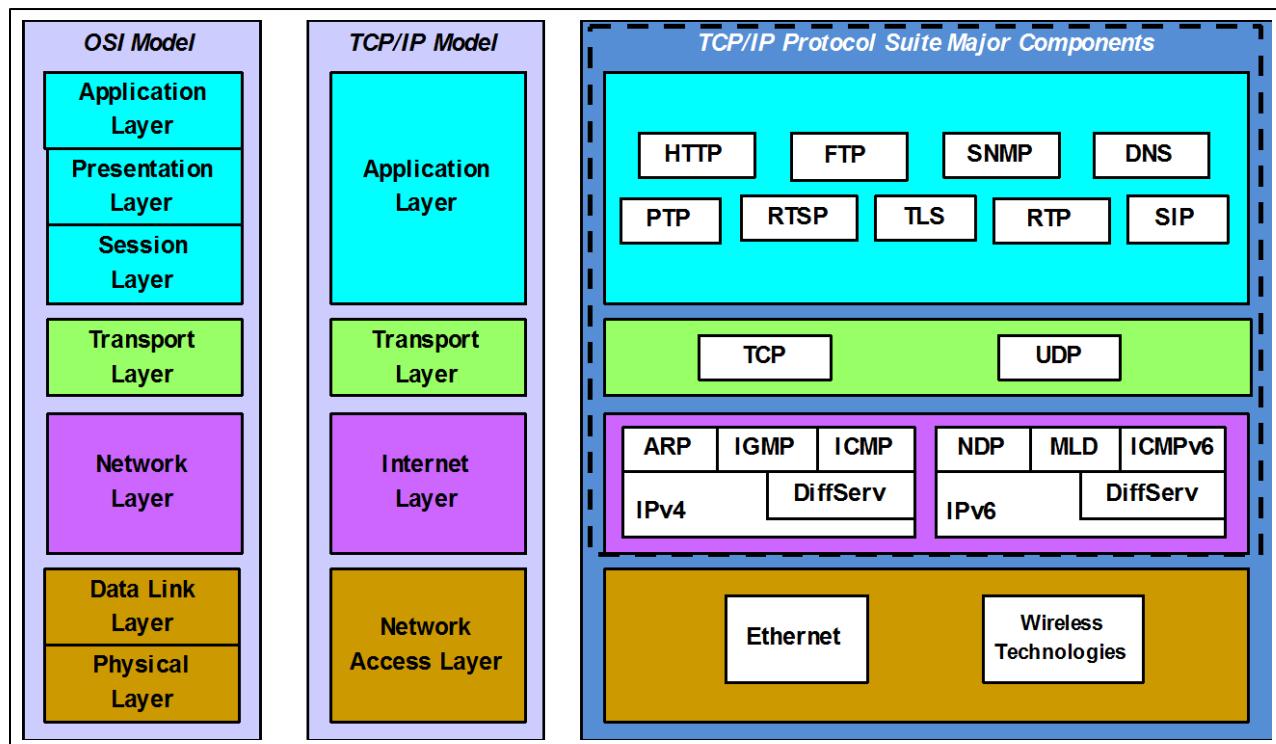

Figure 22-1. OSI and TCP/IP Model with TCP/IP Protocol Suite

This document follows the TCP/IP Model layering convention and consists of the following major sections.

- **Network Access Layer:** Consists of the Physical and Data Link layers that define the underlying hardware networking technology. The networking scope of this layer is limited to the local network connection.
- **Internet Layer Protocols:** Responsible for sending datagrams across potentially multiple networks. Internetworking (i.e., routing) requires sending data from the source network to the destination network.

- **Transport Layer Protocols:** Establishes a basic data channel that an application uses to exchange data.
- **Application Layer Protocols:** Includes protocols used by applications for exchanging application data over the network connections established by the lower-level protocol. Basic network support services are also included (e.g., routing and host configuration protocols).

The bit numbering, bit ordering, and byte ordering conventions used in this chapter are described in [Chapter 21](#) Appendix 21-B.

22.1.1 General NetworkNode Requirements

NetworkNodes with host functionality shall conform to the following standards that specify host functionality requirements.

- Request for Comment (RFC) 1122: Requirements for Internet Hosts – Communication Layers¹
- RFC 1123: Requirements for Internet Hosts – Application and Support²

22.1.2 General NetworkDevice Requirements

NetworkDevices that support IP version 4 (IPv4) routing shall conform to RFC 1812: Requirements for IP Version 4 Routers³, which specifies routing functionality requirements.

22.2 Network Access Layer

22.2.1 Physical Layer

Connectors and cable media should meet the electrical or optical properties required by the applicable standards referenced herein; however, applicability to the selected operational environment will place additional constraints on the selection of the connectors and cable media.

22.2.1.1 Wired Ethernet

NetworkNodes shall support one or more of the bit rate and physical protocol standards specified below.

¹ Internet Engineering Task Force. “Requirements for Internet Hosts – Communication Layers.” RFC 1122. October 1989. Updated by RFC 8029, RFC 6864, RFC 6093, RFC 5884, RFC 1349, RFC 6298, RFC 6633, and RFC 4379. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc1122/>.

² Internet Engineering Task Force. “Requirements for Internet Hosts – Application and Support.” RFC 1123. October 1989. Updated by RFC 5966, RFC 2181, RFC 5321, RFC 7766, and RFC 1349. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc1123/>.

³ Internet Engineering Task Force. “Requirements for IP Version 4 Routers.” RFC 1812. June 1995. Updated by RFC 2644 and RFC 6633. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc1812/>.

22.2.1.1.1 100 megabits per second Ethernet

22.2.1.1.1.1 100BASE-TX

Copper media connections using 100BASE-TX Ethernet shall comply with IEEE 802.3-2012⁴, Section 2, Clause 25.

22.2.1.1.1.2 100BASE-FX

Multi-mode fiber media connections using 100BASE-FX Ethernet shall comply with IEEE 802.3-2012, Section 2, Clause 26.

22.2.1.1.2 Gigabit Ethernet

22.2.1.1.2.1 1000BASE-T

Copper media connections using 1000BASE-T Ethernet shall comply with IEEE 802.3-2012, Section 3, Clause 40.

22.2.1.1.2.2 1000BASE-SX

Multi-mode fiber media connections using 1000BASE-SX Ethernet shall comply with IEEE 802.3-2012, Section 3, Clause 38.

22.2.1.1.2.3 1000BASE-LX

Multi-mode or single-mode fiber media connections using 1000BASE-LX Ethernet shall comply with IEEE 802.3-2012, Section 3, Clause 38.

22.2.1.1.3 10 Gigabit Ethernet

22.2.1.1.3.1 10GBASE-T

Copper media connections using 10 Gigabit Ethernet shall comply with IEEE 802.3-2012, Section 5, Clause 55.

22.2.1.1.3.2 10GBASE-SR, 10GBASE-LR, 10GBASE-ER

Fiber media connections using 10 Gigabit Ethernet shall comply with IEEE 802.3-2012, Section 5, Clause 52.

22.2.1.1.4 Auto-Negotiation

22.2.1.1.4.1 Copper Auto-Negotiation

Copper media connections, as described in the preceding sections, shall support auto-negotiation of speed, duplex, and flow control in the manner specified in IEEE 802.3-2012, Section 2, Clause 28.

22.2.1.1.4.2 Fiber Auto-Negotiation

Gigabit and 10 Gigabit fiber media connections, as described in the preceding sections, should support auto-negotiation of speed, duplex, and flow control in the manner specified in IEEE 802.3-2012, Section 3, Clause 37.

⁴ Institute of Electrical and Electronics Engineers. *IEEE standard for ethernet*. IEEE Std 802.3-2012. New York: Institute of Electrical and Electronics Engineers, 2012.

22.2.1.2 Wireless Technologies

The radio frequency waveform of the Radio Access Network radios shall comply with the Range Commanders Council (RCC)-Telemetry Group variant of the shaped offset quadrature phase shift keying (SOQPSK-TG) ternary constant phase modulation as defined in [Chapter 2](#) Subsection 2.4.3.2.

[Chapter 27](#) provides more details regarding the characteristics of the SOQPSK-TG single-carrier waveform.

NOTE Future revisions of this standard may include 802.11 technologies (wireless Ethernet).

22.2.2 Data Link Layer Protocols

NetworkNodes shall support the Ethernet data link protocols as specified in IEEE 802.3-2012.

22.2.2.1 Frame Structure

NetworkNodes shall support the frame structure, field definitions, and media access control (MAC) conventions specified in IEEE 802.3-2012, Section 1, Clauses 2, 3, and 4.

Data link frames shall support 48-bit locally and universally administered addresses in a manner consistent with IEEE 802.3-2012, Section 1, Clause 3, Paragraph 3.2.3, and Clause 4, Paragraph 4.2.

Data link frame structures shall support type-encapsulated and length-encapsulated frames as specified in IEEE 802.3-2012, Section 1, Clause 3, Paragraph 3.2.6.

22.2.2.2 Media Access Control

NetworkNodes shall support the MAC protocols specified in IEEE 802.3-2012, Section 1, Clauses 2, 3, and 4.

The MAC protocols shall convey type and length-encapsulated frames to support IP network layer protocols.

22.2.2.3 Logical Link Control (LLC)

NetworkNodes shall support the LLC protocols as specified in IEEE 802.2-1998⁵ to the extent necessary to support IP network layer protocols.

⁵ Institute of Electrical and Electronics Engineers. *Information technology – telecommunications and information exchange between systems – local and metropolitan area networks – specific requirements – part 2: logical link control*. IEEE 802.2-1998. New York: Institute of Electrical and Electronics Engineers, 1998.

22.2.2.4 Link Layer Switching

NetworkDevices that perform link layer switching shall conform to the requirements set forth in IEEE 802.1D-2004⁶ for Rapid Spanning Tree Protocol functionality.

22.2.2.5 Link Layer Bridging

NetworkDevices that perform link layer bridging shall conform to the requirements set forth in IEEE 802.1D-2004 for transparent bridging.

22.2.2.6 Link Layer Flow Control

NetworkNodes that support full-duplex Ethernet shall support flow control “PAUSE” frames as specified in IEEE 802.3-2012, Section 3, Clause 31.

22.2.2.7 Address Resolution

22.2.2.7.1 *Address Resolution Protocol for IPv4*

NetworkNodes that support IPv4 shall conform to RFC 826: Ethernet Address Resolution Protocol.⁷

22.2.2.7.2 *Neighbor Discovery Protocol for IPv6*

NetworkNodes that support IPv6 shall conform to the following core link-layer address resolution standards.

- RFC 4861: Neighbor Discovery for IP version 6 (IPv6)⁸
- RFC 4862: IPv6 Stateless Address Autoconfiguration⁹

22.3 Internet Layer Protocols

22.3.1 Internet Protocol version 4

NetworkNodes shall conform to the following IPv4 core standards.

- RFC 791: Internet Protocol¹⁰
- RFC 919: Broadcasting Internet Datagrams¹¹

⁶ Institute of Electrical and Electronics Engineers. *IEEE standard for local and metropolitan area networks: media access control (MAC) bridges*. IEEE 802.1-D-2004. New York: Institute of Electrical and Electronics Engineers, 2004.

⁷ Internet Engineering Task Force. “An Ethernet Address Resolution Protocol.” RFC 826. November 1982. Updated by RFC 5227 and RFC 5494. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc826/>.

⁸ Internet Engineering Task Force. “Neighbor Discovery for IP version 6 (IPv6).” RFC 4861. Updated by RFC 7559, RFC 5942, RFC 6980, RFC 8028, RFC 7527, and RFC 7048. September 2007. Available at <https://datatracker.ietf.org/doc/rfc4861/>.

⁹ Internet Engineering Task Force. “IPv6 Stateless Address Autoconfiguration.” RFC 4862. Updated by 7527. September 2007. Available at <https://datatracker.ietf.org/doc/rfc4862/>.

¹⁰ Internet Engineering Task Force. “Internet Protocol.” RFC 791. Updated by RFC 2474, RFC 6864, and RFC 1349. September 1981. Available at <https://datatracker.ietf.org/doc/rfc791/>.

¹¹ Internet Engineering Task Force. “Broadcasting Internet Datagrams.” RFC 919. May be superseded or amended by update. October 1984. Available at <https://datatracker.ietf.org/doc/rfc919/>.

- RFC 922: Broadcasting Internet Datagrams in the Presence of Subnets¹²

22.3.1.1 Internet Control Message Protocol (ICMP)

NetworkNodes shall conform to RFC 792: Internet Control Message Protocol¹³ and shall include support for ICMP broadcast pings.

22.3.1.2 Internet Group Management Protocol (IGMP)

NetworkNodes that consume or forward dynamically configured IPv4 multicast datagrams shall conform to RFC 3376, Internet Group Management Protocol, Version 3.¹⁴

Switching *NetworkDevices* should use IGMP snooping as presented in RFC 4541: Considerations for Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) Snooping Switches.¹⁵ Such switching *NetworkDevices* shall use at least one of the methods B or C in Subsection 2.1.1.1 of RFC 4541.

IGMP Snooping is recommended for performance considerations in a dynamically configured IPv4 multicast environment.

22.3.2 Internet Protocol version 6 (IPv6)

NetworkNodes that support IPv6 shall conform to RFC 2460: Internet Protocol, Version 6 (IPv6) Specification.¹⁶

22.3.2.1 Internet Control Message Protocol Version 6 (ICMPv6)

NetworkNodes that support IPv6 shall conform to RFC 4443: Internet Control Message Protocol (ICMPv6) for the Internet Protocol Version 6 (IPv6) Specification.¹⁷

22.3.2.2 Multicast Listener Discovery for IPv6

NetworkDevices that support IPv6 should conform to the following MLD standards.

¹² Internet Engineering Task Force. “Broadcasting Internet Datagrams in the Presence of Subnets.” RFC 922. May be superseded or amended by update. October 1984. Available at <https://datatracker.ietf.org/doc/rfc922/>.

¹³ Internet Engineering Task Force. “Internet Control Message Protocol.” RFC 792. Updated by RFC 950, RFC 4884, RFC 6633, and RFC 6918. September 1981. Available at <https://datatracker.ietf.org/doc/rfc792/>.

¹⁴ Internet Engineering Task Force. “Internet Group Management Protocol, Version 3.” RFC 3376. Updated by RFC 4604. October 2002. Available at <https://datatracker.ietf.org/doc/rfc3376/>.

¹⁵ Internet Engineering Task Force. “Considerations for Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) Snooping Switches.” RFC 4541. May be superseded or amended by update. Available at <https://datatracker.ietf.org/doc/rfc4541/>.

¹⁶ Internet Engineering Task Force. “Internet Protocol, Version 6 (IPv6) Specification.” RFC 2460. Updated by RFC 6946, RFC 5095, RFC 5722, RFC 5871, RFC 7045, RFC 6935, RFC 6564, RFC 7112, and RFC 6437. December 1998. Available at <https://datatracker.ietf.org/doc/rfc2460/>.

¹⁷ Internet Engineering Task Force. “Internet Control Message Protocol (ICMPv6) for the Internet Protocol Version 6 (IPv6) Specification.” Updated by RFC 4884. March 2006. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4443/>.

- RFC 3810: Multicast Listener Discovery Version 2 (MLDv2) for IPv6¹⁸
- RFC 4604: Using Internet Group Management Protocol Version 3 (IGMPv3) and Multicast Listener Discovery Protocol Version 2 (MLDv2) for Source-Specific Multicast¹⁹

22.3.3 IP Datagram Transmission

NetworkNodes shall conform to the following core standards for the transmission of IP datagrams.

- RFC 894: A Standard for the Transmission of IP Datagrams over Ethernet Networks²⁰
- RFC 1042: A Standard for the Transmission of IP Datagrams over IEEE 802 Networks²¹

22.3.4 Protocol Independent Multicast

NetworkDevices that perform routing functions shall conform to RFC 4601: Protocol Independent Multicast – Sparse Mode (PIM-SM) Protocol Specification (Revised).²²

22.3.5 Network Routing

NetworkNodes (which includes *NetworkDevices*) shall be capable of being configured to use static routes as defined in Section 7.4 of RFC 1812.

 NOTE	It is expected that this capability is a default capability provided by the host operating system (e.g. the linux <i>route</i> command).
--	--

NetworkDevices that provide network-layer services shall be capable of being configured to use static routes for unicast and multicast traffic.

NetworkDevices that provide IPv4 routing functionality should be capable of running the interior routing protocol found in RFC 2328: OSPF Version 2.²³

¹⁸ Internet Engineering Task Force. “Multicast Listener Discover Version 2 (MLDv2) for IPv6.” RFC 3810. Updated by RFC 4604. June 2004. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc3810/>.

¹⁹ Internet Engineering Task Force. “Using Internet Group Management Protocol Version 3 (IGMPv3) and Multicast Listener Discovery Protocol Version 2 (MLDv2) for Source-Specific Multicast.” RFC 4604. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4604/>.

²⁰ Internet Engineering Task Force. “A Standard for the Transmission of IP Datagrams over Ethernet Networks.” RFC 894. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc894/>.

²¹ Internet Engineering Task Force. “A Standard for the Transmission of IP Datagrams over IEEE 802 Networks.” RFC 1042. February 1988. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc1042/>.

²² Internet Engineering Task Force. “Protocol Independent Multicast – Sparse Mode (PIM-SM) Protocol Specification.” RFC 4601. Updated by RFC 5796, RFC 6226, and RFC 5059. August 2006. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4601/>.

²³ Internet Engineering Task Force. “OSPF Version 2.” RFC 2328. Updated by RFC 6845, RFC 5709, RFC 8042, RFC 7474, RFC 6549, and RFC 6860. April 1998. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2328/>.

NetworkDevices that provide IPv6 routing functionality should be capable of running the following interior routing protocol: RFC 5340: OSPF for IPv6.²⁴

22.4 Transport Layer Protocols

22.4.1 Transmission Control Protocol

NetworkNodes that implement TCP shall conform to RFC 793: Transmission Control Protocol.²⁵

NetworkNodes using TCP shall conform to RFC 5681: TCP Congestion Control.²⁶

22.4.2 User Datagram Protocol (UDP)

NetworkNodes that implement UDP shall conform to RFC 768: User Datagram Protocol.²⁷

22.4.3 Transport Layer Security (TLS) and Secure Sockets Layer (SSL)

NetworkNodes that implement TLS and/or SSL shall conform to the following standards for cryptographic protocols.

- RFC 6101: The Secure Sockets Layer (SSL) Protocol Version 3.0²⁸
- RFC 5246: The Transport Layer Security (TLS) Protocol Version 1.2²⁹

It is anticipated that the TmNS will update and follow the latest government guidance for selection of the exact SSL and TLS versions to use.

Certificate generation and exchanges shall be in accordance with the profile identified in RFC 5280: Internet X.509 Public Key Infrastructure Certificate and Certificate Revocation List (CRL) Profile.³⁰

22.5 Application Layer Protocols

22.5.1 Core NetworkNode Protocols

22.5.1.1 Host/Address Configuration

NetworkNodes requiring IPv4 addressing should conform to RFC 4632: Classless Inter-Domain Routing (CIDR): The Internet Address Assignment and Aggregation Plan.³¹

NetworkNodes requiring IPv6 addressing should conform to RFC 4291: IP Version 6 Addressing Architecture.³²

22.5.1.1.1 *Static Configuration*

NetworkNodes requiring IPv4 address configuration shall support static IP address assignment, conforming to RFC 950: Internet Standard Subnetting Procedure.³³

NetworkNodes requiring IPv6 address configuration shall support static IP address assignment.

22.5.1.1.2 *Dynamic Configuration*

A *TmNS Network* incorporating IPv4 shall support dynamic IP address assignment, conforming to RFC 2131: Dynamic Host Configuration Protocol.³⁴

A *TmNS Network* incorporating IPv6 shall support IPv6 Stateless Address Autoconfiguration as specified in Subsection [22.2.2.7.2](#).

A *TmNS Network* incorporating IPv6 that requires dynamic IP address assignment shall conform to RFC 3315: Dynamic Host Configuration Protocol for IPv6 (DHCPv6).³⁵

22.5.1.2 Domain Name Services

NetworkNodes that use domain name labels shall conform to the following core name service standards.

- RFC 1034: Domain names – concepts and facilities³⁶

³¹ Internet Engineering Task Force. “Classless Inter-domain Routing (CIDR): The Internet Address Assignment and Aggregation Plan.” RFC 4632. August 2006. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4632/>.

³² Internet Engineering Task Force. “IP Version 6 Addressing Architecture.” RFC 4291. Updated by RFC 7371, RFC 7136, RFC 5952, RFC 8064, RFC 7346, and RFC 6052. February 2006. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4291/>.

³³ Internet Engineering Task Force. “Internet Standard Subnetting Procedure.” RFC 950. Updated by RFC 6918. August 1985. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc950/>.

³⁴ Internet Engineering Task Force. “Dynamic Host Configuration Protocol.” RFC 2131. Updated by RFC 6842, RFC 4361, RFC 5494, and RFC 3396. March 1997. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2131/>.

³⁵ Internet Engineering Task Force. “Dynamic Host Configuration Protocol for IPv6 (DHCPv6).” RFC 3315. Updated by RFC 7083, RFC 6221, RFC 7227, RFC 5494, RFC 7283, RFC 7550, RFC 4361, RFC 6644, and RFC 6422. July 2003. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc3315/>.

³⁶ Internet Engineering Task Force. “Domain Names – Concepts and Facilities.” RFC 1034. Updated by many. November 1987. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc1034/>.

- RFC 1035: Domain names – implementation and specification³⁷

22.5.1.3 Time Synchronization

NetworkNodes requiring network time synchronization shall support network time synchronization as specified in IEEE 1588-2008: Precision Time Protocol (PTP) Version 2.³⁸

22.5.1.3.1 IEEE 1588 Master Clock

NetworkNodes performing as IEEE 1588 masters shall support the master clock interface as specified in IEEE 1588-2008.

Master clocks compliant with IEEE 1588-2008:

- shall be able to synchronize with an external source;
- should synchronize with the Global Positioning System (GPS) external time reference (see Subsection 22.5.1.3.5);
- shall use the PTP epoch when performing as the IEEE 1588 grandmaster clock;
- shall use an internal reference clock that tracks a best estimate of GPS time in the absence of an external time synchronization reference.

22.5.1.3.2 IEEE 1588 Slave Clock

NetworkNodes requiring time synchronization to an IEEE 1588-2008 master clock shall support the slave clock interface as specified in IEEE 1588-2008.

Slave clocks shall continue to run freely using the last known time in the absence of a grandmaster clock on the network.

22.5.1.3.3 IEEE 1588 Boundary Clock

NetworkDevices that transport time synchronization data to devices requiring a high degree of synchronization shall support boundary clock techniques or approaches that are interoperable with boundary clocks (e.g., transparent clock implementations) as specified in IEEE 1588-2008.

22.5.1.3.4 One Pulse-Per-Second (1 PPS) Outputs on IEEE 1588 Devices

NetworkNodes with IEEE 1588-2008 master or slave clocks should support external 1 PPS outputs to allow verification of time signal lock between distributed clocks within one microsecond.

- 1 PPS outputs should be compatible with standard 0-to-5-volts direct current transistor-transistor logic levels.
- The rising edge of the pulse shall define the beginning of a second.
- The duty cycle of the 1 PPS signal shall be between 5% and 95%.

³⁷ Internet Engineering Task Force. “Domain Names – Implementation and Specification.” RFC 1035. Updated by many. November 1987. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc1035/>.

³⁸ Institute of Electrical and Electronics Engineers. IEEE Standard for a Precision Clock Synchronization Protocol for Networked Measurement and Control Systems. IEEE 1588-2008. Geneva: International Electrotechnical Commission, 2008.

- The pulse rise time between the 10% and 90% amplitude points shall be less than or equal to one microsecond.

22.5.1.3.5 *Global Positioning System*

The GPS external time reference interface shall implement the GPS Space Segment RF waveform interface and the GPS Navigation User Segment interface as specified in IS-GPS-200H, NAVSTAR Global Positioning System (GPS) Interface Specification.³⁹

22.5.1.3.6 *TmNS Time Format*

The TmNS-specific time format describes a time format for encoding timestamps in a textual representation.

```
TmNSTimestamp = TmNSdate "T" TmNSTime  
TmNSdate      = 8DIGIT ; < YYYYMMDD >  
TmNSTime      = 6DIGIT [ "." 1*9DIGIT ] ; < hhmmss.fraction >
```

where:

YYYY is the four-digit year
MM is month (01-12)
DD is day of the month (01-31)
hh is hours on a 24-hour clock (00-23)
mm is minutes (00-59)
ss is seconds (00-59)
fraction is the fractional portion of the seconds

22.5.1.4 Information Assurance and Encryption

22.5.1.4.1 *High Assurance Internet Protocol Encryptor*

NetworkNodes that provide Information Assurance services shall comply with High Assurance Internet Protocol Encryptor (HAIPE) Interoperability Specification (IS).

22.5.1.4.2 *Advanced Encryption Standard (AES)*

NetworkNodes that support AES data encryption shall comply with NIST FIPS PUB 197: Advanced Encryption Standard (AES).⁴⁰

22.5.2 Core TmNSApp Protocols

22.5.2.1 Simple Network Management Protocol (SNMP)

All *TmNS manageable applications (TMAs)* shall conform to the following management protocol standards.

³⁹ Global Positioning Systems Directorate. “Navstar GPS Space Segment/Navigation User Interfaces.” IS-GPS-200H. 24 September 2013. May be superseded by update. Retrieved 18 April 2017. Available at <http://www.gps.gov/technical/icwg/IS-GPS-200H.pdf>.

⁴⁰ National Institute of Standards and Technology. “Specification for the Advanced Encryption Standard (AES).” FIPS PUB 197. 26 November, 2001. May be superseded by update. Available at <http://nvlpubs.nist.gov/nistpubs/FIPS/NIST.FIPS.197.pdf>.

- RFC 3411: An Architecture for Describing Simple Network Management Protocol (SNMP) Management Frameworks⁴¹
- RFC 3413: Simple Network Management Protocol (SNMP) Applications⁴²
- RFC 2579: Textual Conventions for SMIv2⁴³

[Chapter 25](#) defines the specific SNMP-based resources.

Error handling is detailed by the SNMP RFCs referenced in this document. Some key SNMP protocol error cases are emphasized here for clarity:

- The SNMP exception value of noSuchObject(0) shall be returned for each variable not implemented, as stated in RFC 3416⁴⁴;
- Unsupported enumerations or value ranges shall return an SNMP error-status of inconsistentValue(12), as stated in RFC 3416.

22.5.2.1.1 SNMP Version 3

The *TMAs* that implement SNMPv3 shall support the following RFCs.

- RFC 3410: Introduction and Applicability Statements for Internet Standard Management Framework⁴⁵
- RFC 3412: Message Processing and Dispatching for the Simple Network Management Protocol (SNMP)⁴⁶
- RFC 3414: User-based Security Model (USM) for version 3 of the Simple Network Management Protocol (SNMP)⁴⁷
- RFC 3415: View-based Access Control Model (VACM) for the Simple Network Management Protocol (SNMP)⁴⁸

- RFC 3417: Transport Mappings for the Simple Network Management Protocol (SNMP)⁴⁹
- RFC 3826: The Advanced Encryption Standard (AES) Cipher Algorithm in the SNMP User-based Security Model⁵⁰

22.5.2.1.2 SNMP Version 2c

The *TMAs* that implement SNMPv2c shall support the following RFCs.

- RFC 1901: Introduction to Community-based SNMPv2⁵¹
- RFC 2578: Structure of Management Information Version 2 (SMIV2)⁵²
- RFC 3416

22.5.2.2 Hypertext Transfer Protocol (HTTP)

The *TmNSApps* that support HTTP shall conform to the following protocol standards.

- RFC 7230: Hypertext Transfer Protocol (HTTP/1.1): Message Syntax and Routing⁵³
- RFC 7231: Hypertext Transfer Protocol (HTTP/1.1): Semantics and Content⁵⁴
- RFC 7232: Hypertext Transfer Protocol (HTTP/1.1): Conditional Requests⁵⁵
- RFC 7233: Hypertext Transfer Protocol (HTTP/1.1): Range Requests⁵⁶
- RFC 7234: Hypertext Transfer Protocol (HTTP/1.1): Caching⁵⁷

- RFC 7235: Hypertext Transfer Protocol (HTTP/1.1): Authentication⁵⁸

22.5.2.3 Real Time Streaming Protocol (RTSP)

The *TmNSApps* that support TmNS Data Delivery using a *DataDeliveryControlChannel* shall exchange control commands and parameters using RTSP, as specified in RFC 2326: Real Time Streaming Protocol (RTSP).⁵⁹

[Chapter 26](#) defines the *DataDeliveryControlChannel*, which is an augmentation of the RTSP specification.

22.5.2.4 File Transfer

The *TmNSApps* that support file transfer services shall support RFC 959: File Transfer Protocol (FTP).⁶⁰

22.5.2.5 Voice Over IP

The *TmNSApps* that provide voice services shall comply with one or more of the following Voice over IP standards.

- International Telecommunication Union (ITU) H.323 Packet Based Multimedia Communication⁶¹
- RFC 3261: SIP: Session Initiation Protocol⁶²
- RFC 3550: RTP: A Transport Protocol for Real-Time Applications⁶³

The *TmNSApps* that provide voice services shall comply with one or more of the following coder-decoder standards.

- ITU-T G.711 – Pulse Code Modulation (PCM)⁶⁴
- ITU-T G.726 – Adaptive Differential Pulse Code Modulation (ADPCM)⁶⁵

⁵⁸ Internet Engineering Task Force. “Hypertext Transfer Protocol (HTTP/1.1): Authentication.” RFC 7235. June 2014. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc7235/>.

⁶³ Internet Engineering Task Force. “RTP: A Transport Protocol for Real-Time Applications.” RFC 3550. Updated by RFC 7022, RFC 5761, RFC 8108, RFC 8083, RFC 6222, RFC 6051, RFC 5506, RFC 7160, and RFC 7164. July 2003. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc3550/>.

⁶⁴ International Telecommunication Union. “Pulse Code Modulation (PCM) of Voice Frequencies.” ITU-T G.711. May be superseded by update. Retrieved 18 April 2017. Available at <https://www.itu.int/rec/T-REC-G.711/en>.

⁶⁵ International Telecommunication Union. “40, 32, 24, 16 kbit/s Adaptive Differential Pulse Code Modulation (ADPCM).” ITU-T G.726. 14 December 1990. May be superseded by update. Retrieved 18 April 2017. Available at <https://www.itu.int/rec/T-REC-G.726/en>.

22.5.2.6 Secure Communications

The *TmNSApps* requiring secure, reliable network communication over connection-oriented transports shall conform to RFC 5246.

The *TmNSApps* requiring secure network communication over SNMP shall conform to RFC 5953: Transport Layer Security (TLS) Transport Model for the Simple Network Management Protocol (SNMP).⁶⁶

Specific implementation may require additional security.

The SNMP incorporates a security model that utilizes TLS. The open-source Net-SNMP implementation has supported both TLS and Datagram TLS (DTLS) since version 5.6.

22.5.2.6.1 Secure FTP

The *TmNSApps* that support secure file transfer services shall support the following protocols.

- RFC 2228: FTP Security Extensions⁶⁷
- RFC 4217: Securing FTP with TLS⁶⁸

22.5.2.6.2 Secure HTTP

The *TmNSApps* that support secure HTTP services should follow the recommendations in RFC 2818: HTTP Over TLS.⁶⁹

22.5.2.7 Uniform Resource Identifier (URI)/Uniform Resource Name (URN)

TmNSApps shall conform to the following standards governing URI/URN syntax.

- RFC 3986: Uniform Resource Identifier (URI): Generic Syntax⁷⁰

⁶⁶ Internet Engineering Task Force. “Transport Layer Security (TLS) Transport Model for the Simple Network Management Protocol (SNMP).” RFC 5953. Obsoleted by RFC 6353. August 2010. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc5953/>.

⁶⁷ Internet Engineering Task Force. “FTP Security Extensions.” RFC 2228. October 1997. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2228/>.

⁶⁸ Internet Engineering Task Force. “Securing FTP with TLS.” RFC 4217. October 2005. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4217/>.

⁶⁹ Internet Engineering Task Force. “HTTP Over TLS.” RFC 2818. Updated by RFC 5785 and RFC 7230. May 2000. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2818/>.

⁷⁰ Internet Engineering Task Force. “Uniform Resource Identifier (URI): Generic Syntax.” RFC 3986. Updated by RFC 7320 and RFC 6874. January 2005. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc3986/>.

- RFC 3406: Uniform Resource Names (URN) Namespace Definition Mechanisms⁷¹

The TmNS-specific URN is not registered. It is anticipated that the RCC may register it in the future.

22.5.3 Quality of Service

22.5.3.1 Differentiated Services (DiffServ)

NetworkNodes shall support the DiffServ standards as specified in:

- RFC 2474: Definition of the Differentiated Services Field (DS Field) in the IPv4 and IPv6 Headers⁷²;
- RFC 2475: An Architecture for Differentiated Services⁷³;
- RFC 2597: Assured Forwarding PHB Group⁷⁴;
- RFC 3140: Per Hop Behavior Identification Codes;⁷⁵
- RFC 3246: An Expedited Forwarding PHB (Per-Hop Behavior);⁷⁶
- RFC 4594: Configuration Guidelines for DiffServ Service Classes.⁷⁷

22.5.3.2 DiffServ Code Point (DSCP) Assignments

NetworkNodes shall mark IP packets with DSCP markings as specified through configuration via an MDL file.

The DSCP assignments identified in [Table 22-1](#) have restricted usage and shall only be assigned to network traffic that is directly related to network and internetwork control, such as RF network messages that are exchanged between RF link management and radios.

NetworkNodes shall not mark traffic with the restricted DSCP assignments if the traffic is not directly related to network and internetwork control.

⁷¹ Internet Engineering Task Force. “Uniform Resource Names (URN) Namespace Definition Mechanisms.” RFC 3406. October 2002. May be superseded or amended by update. Available at <https://datatracker.ietf.org/doc/rfc3406/>.

⁷² Internet Engineering Task Force. “Definition of the Differentiated Services Field (DS Field) in the IPv4 and IPv6 Headers.” RFC 2474. Updated by RFC 3260 and RFC 3168. December 1998. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2474/>.

⁷³ Internet Engineering Task Force. “An Architecture for Differentiated Services.” RFC 2475. Updated by RFC 3260. December 1998. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2475/>.

⁷⁴ Internet Engineering Task Force. “Assured Forwarding PHB Group.” RFC 2597. Updated by RFC 3260. June 1999. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc2597/>.

⁷⁵ Internet Engineering Task Force. “Per Hop Behavior Identification Codes.” RFC 3140. June 2001. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc3140/>.

⁷⁶ Internet Engineering Task Force. “An Expedited Forwarding PHB (Per Hop Behavior).” RFC 3246. March 2002. May be superseded or amended by update. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc3246/>.

⁷⁷ Internet Engineering Task Force. “Configuration Guidelines for DiffServ Service Classes.” RFC 4594. Updated by RFC 5865. Retrieved 18 April 2017. Available at <https://datatracker.ietf.org/doc/rfc4594/>.

Table 22-1. Restricted DSCP Assignments

DSCP Class	IP Precedence	DSCP Range	Comment
6	Internetwork Control	6'b110000 (6'd48) – 6'b110111 (6'd55)	Used for IP routing protocols
7	Network Control	6'b111000 (6'd56) – 6'b111111 (6'd63)	Link layer and routing protocol keep alive

NetworkDevices forwarding IP packets with unrecognized DSCP values shall forward the packets with the DSCP value unchanged but queue the packets using the PHB of 6'b000000.

This page intentionally left blank.

APPENDIX 22-A

Default DSCP Traffic Classification for TmNS-based Systems

The DSCP markings to be assigned to network traffic in a TmNS-based system are described in the MDL configuration file for the test. The default DSCP markings to be associated with different types of traffic in a TmNS-based system are described in [Table A-1](#).

Table A-1. DSCP Traffic Classifications for TmNS-based Systems

IEEE 802.1Q PCP – IEEE P802.1p	DSCP Category Description	Expected Use Within TmNS-based System
0 – Best Effort	Best Effort	DSCP 0: General Network Traffic (e.g. FTP)
1 – Background	Class 1	DSCP 8: RC Delivery at Normal Priority & System Management Status
2 – Excellent Effort	Class 2	DSCP 16: LTC Delivery
3 – Critical Applications	Class 3	DSCP 24: RC Delivery at High Priority
4 – “Video,” < 100 ms latency & jitter	Class 4	DSCP 32: System Management Control & Video
5 – “Voice,” < 10 ms latency and jitter	Expedited Forwarding (EF)	DSCP 40: Voice
6 – Internetwork Control	Control (used for IP routing protocols)	DSCP 48: RF Network Messages
7 – Network Control	Control (link layer and routing protocol keep alive)	DSCP 56: RF Network Messages

This page intentionally left blank.
